COMPUTER PROGRAMMING 1

Academic compilation

BSIT 103i | Jose Rizal University

Contents of the supplied activities folder

01 Flowchart symbols - Prelim PT1 (original PDF)

02 Algorithms - Prelim PT2 (converted Word document)

03 Daily wage flowchart

04 Student information program

05 Digit count

06 Difference of digits (two screenshots)

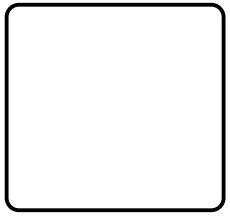

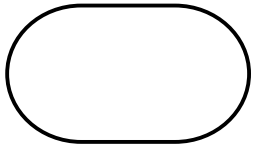

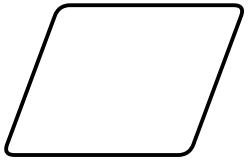

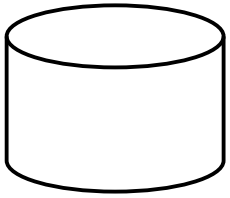

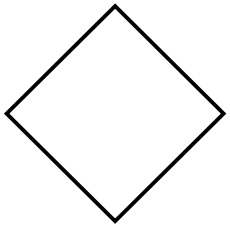

07 All or not

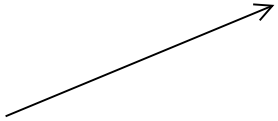

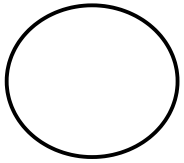

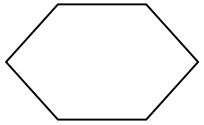

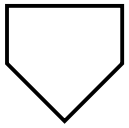

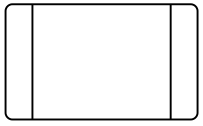

08 Addition and subtraction

09 Divisible by?

Contains the supplied work only; additional activities may be added later.

Made with VisualParadigm
For non-commercial use

SYMBOLS/SHAPES	NAME OF SHAPE	MAIN FUNCTION
	PROCESS	ACTION AND STEPS WITHIN THE PROCESS
	TERMINATION	THE START AND END OF PROCESS
	INPUT/OUTPUT OR DATA	DATA ADDED TO THE FLOW OR THE RESULT FROM THE FLOW
	DATABASE	DATA THAT CAN BE ACCESS IN ANY ORDER
	DECISION	BRANCH OR QUESTION IN THE PROCESS

SYMBOLS/SHAPES	NAME OF SHAPE	MAIN
	FLOW LINES	FLOW LINES CONNECTS ONE SYMBOL TO ANOTHER
	ON PAGE	USE THIS SHAPE TO CREATE A CROSS REFERENCE FROM ONE PROCESS TO ANOTHER ON THE SAME PAGE OF YOUR FLOW CHART
	PREPARATION/INITIALIZATION	SET UP NECESSARY FOR THE REST OF THE FLOW
	OFF PAGE	INDICATES THAT THE PROCESS CONTINUES OFF PAGE
	PRE DEFINED PROCESS	INDICATES A NAMED PROCESS, SUCH AS A SUBROUTINE OR A MODULE

CADIGAL, JAMES PATRICK S.
MARIKIT, LIAN ARLIE I.

1. Given the three numbers A, B, C. Write an algorithm to compute and print out the sum, the average, and the product of these values.

Start

Let A = 0, B = 0, C = 0,

Let sum = 0, ave = 0, product = 0

Input A, B, C

sum = A + B + C

Print = sum

ave = sum / 3

Print = ave

product = A * B * C

Print product

End

2. Write an algorithm that will ask the user to get final grades. Evaluate the final grade, if the final grade is greater than75, indicate the remarks are “Passed”, if not the remarks are “Failed”. (Please refer to the slides for samples of conditions.)

Start
Input Grade
If Grade is > = 75
Then Display “Passed”
Else
Then Display “Failed”
End

3. Given the value of the password is “JRU”, write an algorithm that if the user input the correct password, it will display “Password is Accepted” if not “Password is Incorrect”. (Please refer to the slides for samples of conditions.)

Start
Input “UserPassword”
If Password = “JRU” then
Display “Password is Accepted”
Else
Display “Password is Incorrect”
End

4. Write an algorithm that would display numbers from 1-5. (Please refer to the slides for samples of conditions.)

Start

i = 1

While i <= 5

Display i

i = i + 1

End

N I Output

5 1 1

2 2

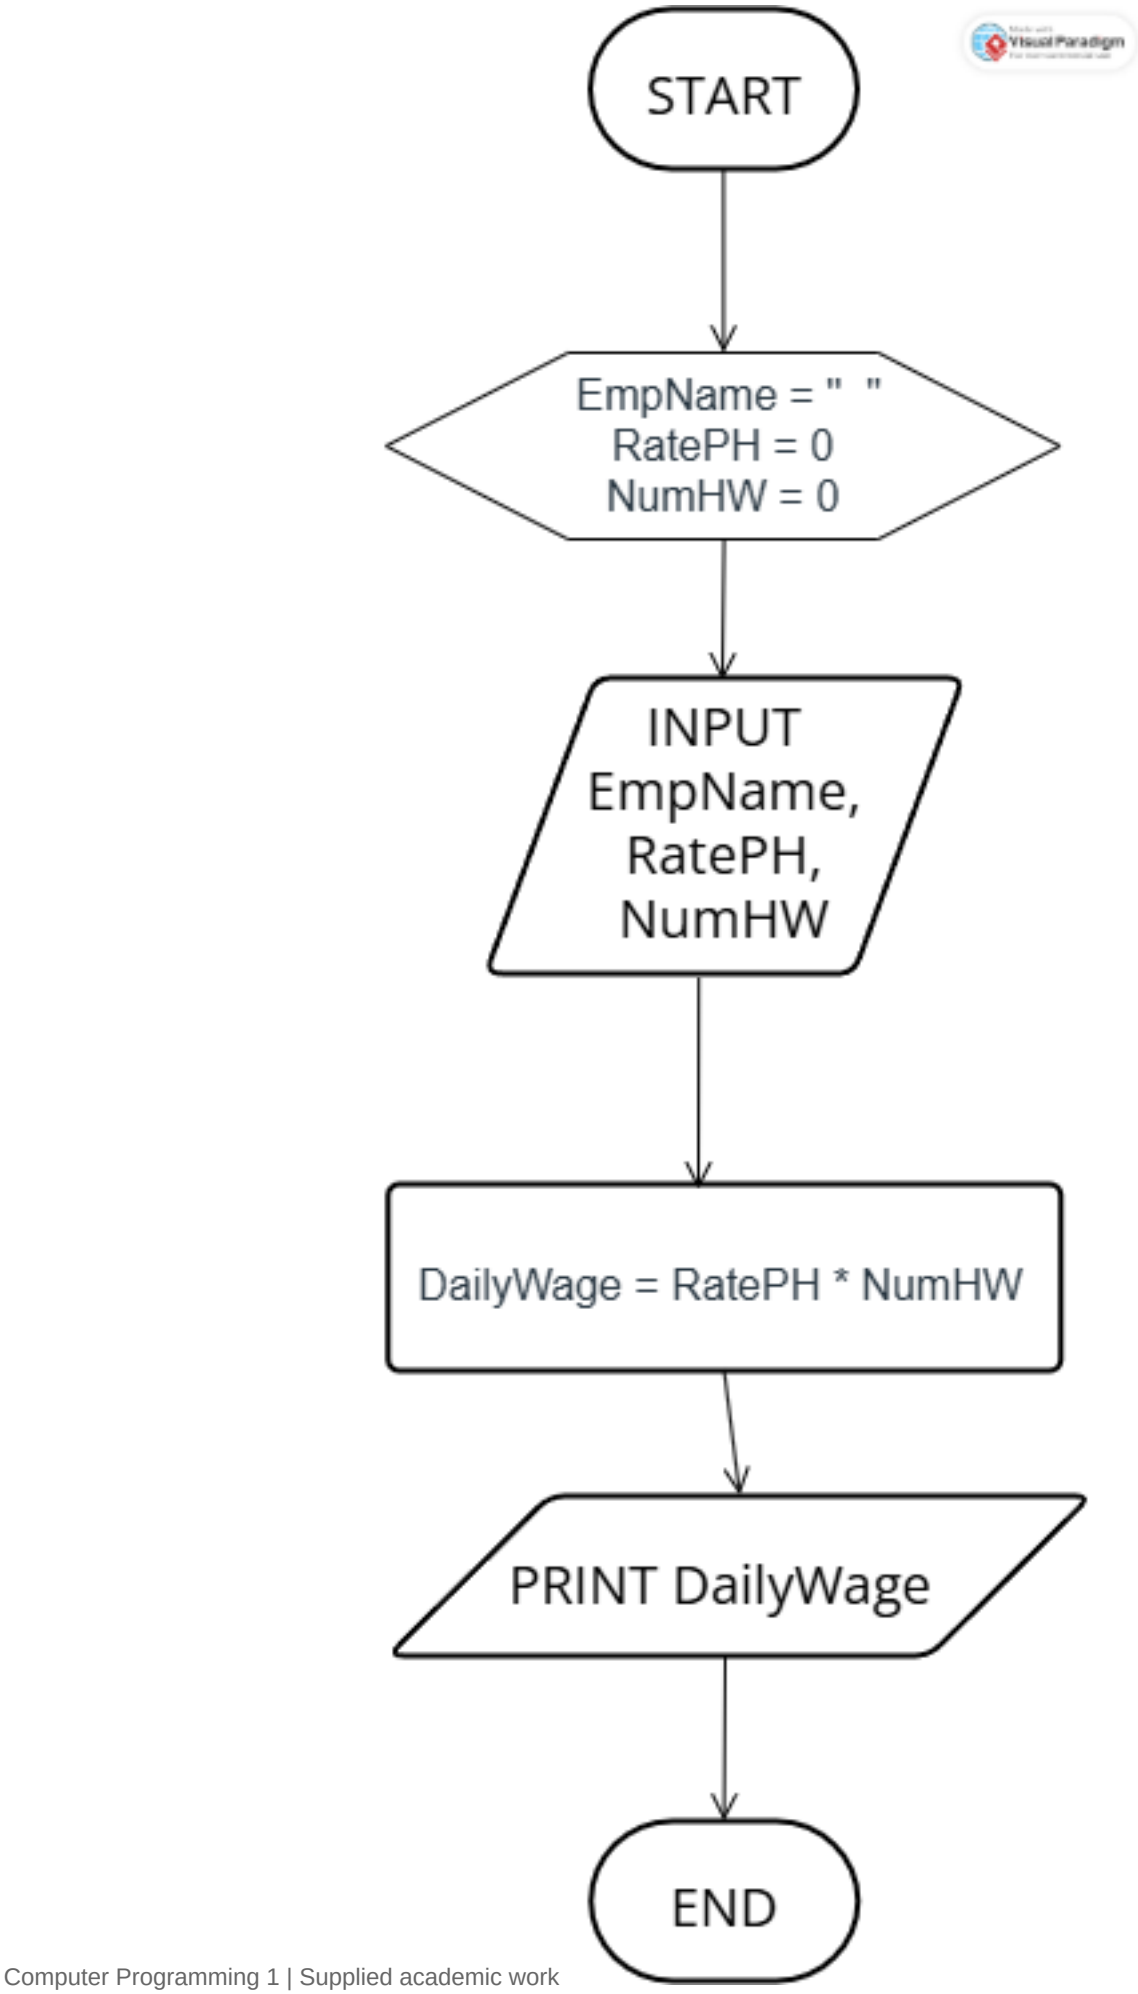

3 3

4 4

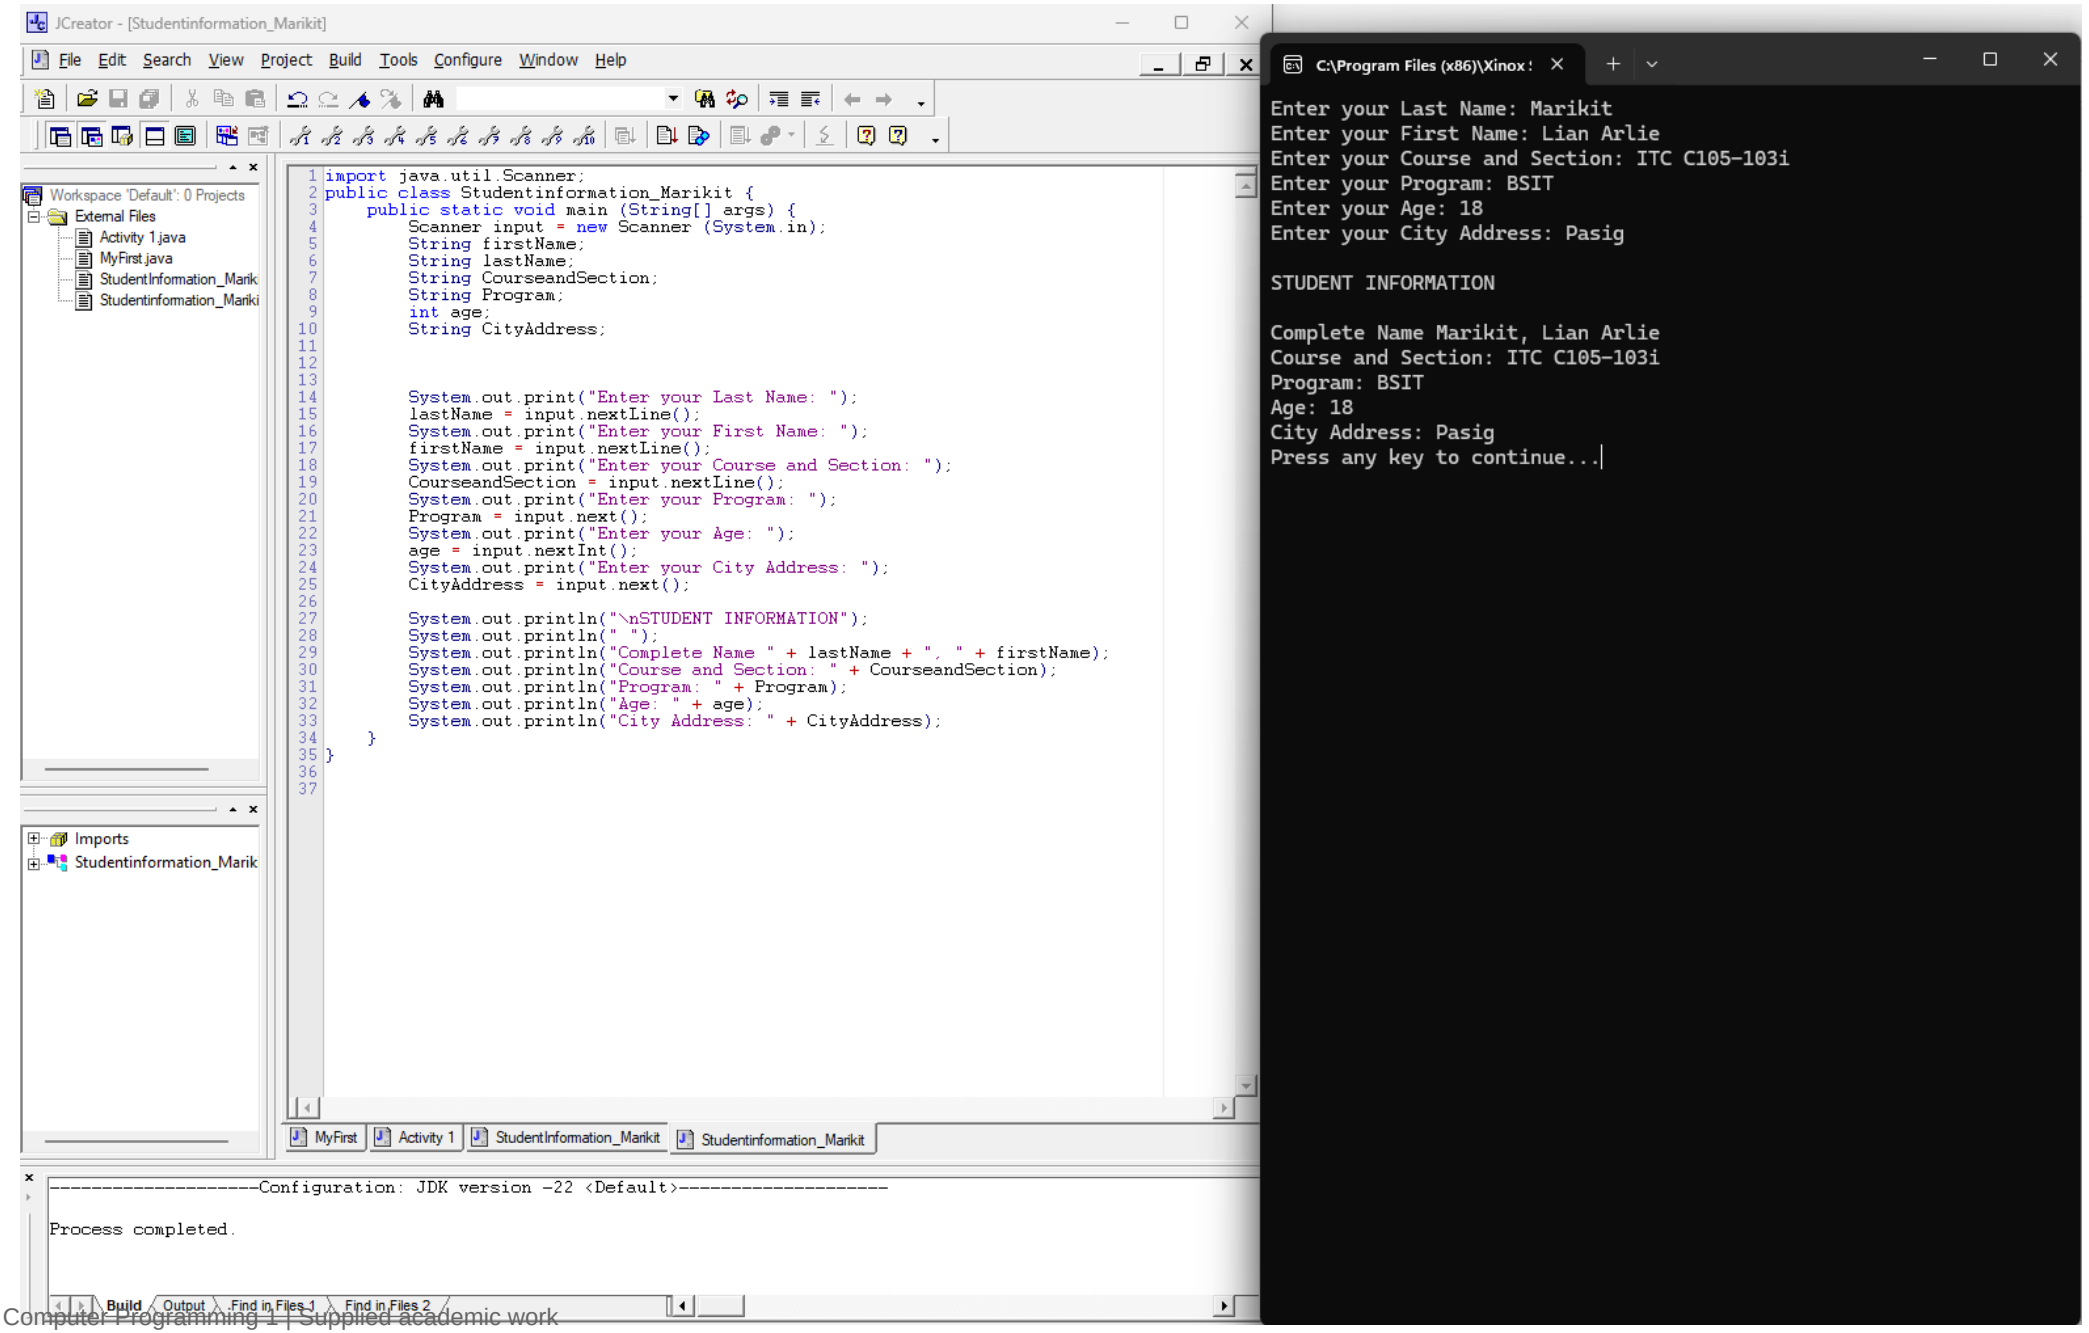

5

End

38ms
In Review Mode, you can practice, run, and test - but everything you do here will not affect your actual activity score.
Item 1
10 points
Digit Count
by CodeChum Admin
Write a program that takes an integer number. Use a while loop to count the number of digits in the entered number and print it.
Sample Output 1
Enter a positive integer: 232512
Number of digits: 6
Sample Output 2
Enter a positive integer: 21258
Number of digits: 5
Sample Output 3
Enter a positive integer: 56767
Number of digits: 5
Main.java
Java
import java.util.Scanner;
public class Main {
public static void main(String [] args) {
Scanner lian = new Scanner(System.in);
int numz, counz = 0;
System.out.print("Enter a positive integer: ");
numz = lian.nextInt();
while (numz > 0) {
counz = counz + 1;
numz = numz/ 10;
}
System.out.println("Number of digits: "
}
}

All or Not
by CodeChum Admin
Write a program that takes three integers, num1, num2, and num3, as input and classifies them based on the following conditions:
If all three numbers are positive, it prints "All numbers are positive."
If all three numbers are negative, it prints "All numbers are negative."
If all three numbers are even, it prints "All numbers are even."
If all three numbers are odd, it prints "All numbers are odd."
If none of the above conditions are met, it prints "Numbers are different."
Sample Output 1
Main.java
Java
1 import java.util.Scanner;
2
3 public class Main{
4 public static void main(String [] args) {
5 Scanner lian = new Scanner(System.in);
6
7 int arlie1, mari2, kit3;
8
9 System.out.print("Enter first number: ");
10 arlie1 = lian.nextInt();
11 System.out.print("Enter second number: ");
12 mari2 = lian.nextInt();
13 System.out.print("Enter third number: ");
14 kit3 = lian.nextInt();
15
16 if(arlie1 > 0 & mari2 > 0 & kit3 > 0) {
17 System.out.println("All numbers are positive.");
18 }
19 else if (arlie1 < 0 & mari2 < 0 & kit3 < 0) {
20 System.out.println("All numbers are negative.");
21 }
22 else if (arlie1 % 2 == 0 & mari2 % 2 == 0 & kit3 % 2 == 0) {
23 System.out.println("All numbers are even.");
24 }
